Professional Summary

Undergraduate Informatics student with strong interests in Artificial Intelligence, Machine Learning, Data Analytics, and Digital Transformation. Experienced in developing end-to-end AI solutions using Python, TensorFlow, Scikit-Learn, and FastAPI, covering data preprocessing, model development, evaluation, deployment, and REST API integration. Demonstrated leadership experience managing multidisciplinary projects involving AI, backend, frontend, and data science teams.

Education

Universitas Gunadarma

Aug 2022 – Sep 2026

Bachelor of Informatics Engineering

Technical Skills

Programming Languages: Python, SQL, Java, JavaScript

Artificial Intelligence: Machine Learning, Deep Learning, Neural Networks, TensorFlow, Scikit-Learn, NLP, Computer Vision, Generative AI, Prompt Engineering

Data Analytics: Pandas, NumPy, Data Cleaning, Data Preprocessing, Feature Engineering, Data Visualization

Backend Development: FastAPI, REST API, JSON

Tools & Platforms: Git, GitHub, Jupyter Notebook, Google Colab, VS Code

Project & Documentation: Technical Documentation, Project Management, Agile Collaboration, Reporting, Presentation

Experience

GizGOAT Health Recommendation Platform

Feb 2026 – July 2026

AI Engineer & Project Manager

Capstone Project

- Led project planning and cross-functional coordination across AI, Data Science, Backend, and Frontend teams.
- Designed and implemented end-to-end ML workflows covering data preprocessing, model training, evaluation, and deployment.
- Developed a deep learning-based sleep quality prediction system using TensorFlow Functional API and custom training workflows.
- Achieved MAE of 0.218 and R^2 of 0.846 on test data.
- Built RESTful AI services using FastAPI for application integration and model inference.
- Managed model artifacts including encoders, scalers, and trained weights for deployment.
- Applied Git-based version control and collaborative development practices throughout the project lifecycle.

Projects

Sleep Quality Prediction System | *TensorFlow, FastAPI, Scikit-Learn, PostgreSQL*

2026

- Developed a deep learning model for sleep quality prediction using TensorFlow Functional API on health and lifestyle data.
- Built an end-to-end ML pipeline covering preprocessing, training, evaluation, and model export.
- Implemented a REST API inference service using FastAPI for full-stack integration.
- Collaborated in a cross-functional team to develop a scalable AI system using service-oriented architecture.

Flower Image Classification using MobileNetV2 | *TensorFlow, Computer Vision, Transfer Learning*

2025

- Built a multi-class flower classification system using MobileNetV2 transfer learning on 3,000+ images.
- Implemented a complete computer vision pipeline including data augmentation, training, and evaluation.
- Fine-tuned ImageNet-pretrained MobileNetV2 with a custom classification head.
- Achieved 89.75% test accuracy using Early Stopping and learning rate scheduling.
- Exported the model to TensorFlow SavedModel, TFLite, and TensorFlow.js for deployment.

- Developed a responsive digital platform to centralize public information, administrative services, news, and community activities for a local government office.
- Built a client-side admin dashboard for content management, image uploads, and live content preview.
- Implemented dynamic content management using Vanilla JavaScript and LocalStorage as a lightweight client-side storage solution.
- Integrated Google Maps and responsive design to improve accessibility across desktop and mobile devices.
