Professional Summary

Final-year Informatics Engineering student with hands-on experience developing end-to-end AI and machine learning solutions using Python, TensorFlow, Scikit-Learn, and FastAPI. Experienced in deep learning, computer vision, data preprocessing, model evaluation, deployment, and REST API integration through projects spanning cybersecurity, health technology, and image classification. Demonstrated experience collaborating across AI, Data Science, Backend, and Frontend teams, with additional project management and user-facing application development experience.

Education

Universitas Gunadarma

Aug 2022 – Present

Bachelor of Informatics Engineering

Technical Skills

Programming: Python, SQL, JavaScript, Java

Artificial Intelligence: Machine Learning, Deep Learning, Neural Networks, Computer Vision, Transfer Learning

Frameworks & Libraries: TensorFlow, Keras, Scikit-Learn, Pandas, NumPy, MobileNetV2

Data & Model Development: Data Preprocessing, Feature Engineering, Model Training, Model Evaluation, Model Deployment

Backend & Web Development: FastAPI, REST APIs, JSON, HTML5, CSS3, JavaScript, LocalStorage

Tools & Platforms: Git, GitHub, Docker, Jupyter Notebook, Google Colab, VS Code

Collaboration & Project Development: Project Management, Agile Collaboration, Cross-Functional Teamwork, Technical Documentation, Reporting, Presentation

Experience

GizGOAT Health Recommendation Platform

Feb 2026 – July 2026

AI Engineer & Project Manager

Capstone Project

- Led project planning and cross-functional coordination across AI, Data Science, Backend, and Frontend teams.
- Designed and implemented end-to-end ML workflows covering data preprocessing, model training, evaluation, and deployment.
- Developed a deep learning-based sleep quality prediction system using TensorFlow Functional API and custom training workflows.
- Achieved a best model R^2 of approximately 0.69 on test data.
- Built RESTful AI services using FastAPI for application integration and model inference.
- Managed model artifacts including encoders, scalers, and trained weights for deployment.
- Applied Git-based version control and collaborative development practices throughout the project lifecycle.

Projects

Deep Learning Intrusion Detection System | *TensorFlow, Keras, Python, Deep Learning, Cybersecurity*

2026

- Developed a deep learning-based Intrusion Detection System (IDS) for detecting malicious network traffic using structured network-flow data.
- Built an end-to-end machine learning workflow covering data preprocessing, model training, evaluation, artifact management, and batch inference.
- Integrated the trained TensorFlow/Keras model with preprocessing artifacts to perform attack detection and prediction on CSV network traffic data.
- Developed desktop and CLI inference workflows with automated artifact discovery, model validation, testing, and reproducible project documentation.

Flower Image Classification using MobileNetV2 <i>TensorFlow, Computer Vision, Transfer Learning</i>	2025
--	-------------

- Built a multi-class flower classification system using MobileNetV2 transfer learning on 3,000+ images.
- Implemented a complete computer vision pipeline including data augmentation, training, and evaluation.
- Fine-tuned ImageNet-pretrained MobileNetV2 with a custom classification head.
- Achieved 89.75% test accuracy using Early Stopping and learning rate scheduling.
- Exported the model to TensorFlow SavedModel, TFLite, and TensorFlow.js for deployment.

Urban Village Digitalization Platform [Live Demo] <i>HTML5, CSS3, JavaScript, LocalStorage</i>	2025
---	-------------

- Developed a responsive digital platform to centralize public information, administrative services, news, and community activities for a local government office.
- Built a client-side admin dashboard for content management, image uploads, and live content preview.
- Implemented dynamic content management using Vanilla JavaScript and LocalStorage as a lightweight client-side storage solution.
- Integrated Google Maps and responsive design to improve accessibility across desktop and mobile devices.
